

# Documenting Hepatitis B Control Measures for a Hepatitis B Positive Pregnant Mother and Infant Born to a Hepatitis B Positive Mother

Documentation in NC EDSS provides verification that control measures were issued as required by law to a person known to be infected with hepatitis B virus. The following steps are how to document control measures for a Hepatitis B pregnant woman.

1. Open the Clinical Package.
2. Scroll down to the Isolation/Quarantine/Control Measures section.
3. Click "Yes" beside the question "Restrictions to movement or freedom of action?"
4. Check all appropriate restrictions imposed by the control measures:
  - a. Sexual behavior
  - b. Blood and bodily fluids
5. Enter the date the control measures were issued.
6. Enter notes in the text box, if needed. i.e., if control measures were issued over the phone; if a certified letter was mailed to the client and returned to sender; or if control measures were issued by another provider.
7. Click "Save."
8. If control measures were given face to face and were signed by the person, you can upload a copy of the signed control measures to the event.

**\*\*Follow your health department's policy on issuing control measures to client and how to handle those that are lost to follow-up.\*\***

The following are steps to document control measures given to parents or guardians of an infant born to a hepatitis B positive mother in the infant's event:

1. Review control measures with the parent or guardian regarding infants born to HBsAg-positive mothers including obtaining the hepatitis B vaccine and HBIG within 12 hours of birth, obtaining the rest of the vaccine series at 1-2 months and 6 months of age, and the collection of the PVST at 9-12 months of age or 1-2 months after the last dose of vaccine if the completion of the vaccine series is delayed.
2. Document when and what control measures were reviewed with the parent or guardian in the notes section on the dashboard of the infant's event.
