

# North Carolina Heat Report

## June 4-10, 2023

### This Week

- Daily maximum heat indices ranged from 72°F to 88°F (median = 80°F) at Raleigh-Durham International Airport (RDU)
- 50 emergency department visits for heat-related illness were identified (Figure 1)
  - 72% of visits were among males
  - 42% of visits were among patients aged 25-44 years
  - The most frequent heat related diagnosis code was heat exhaustion (Table 2)
  - Most visits occurred in hospitals in the Piedmont (62%) and Coastal (27%) regions
  - 13% of visits occurred in hospitals in the Sandhills sub-region<sup>1</sup>
- During June 4-10, the proportion of emergency department visits for heat-related illness was 0.05%, lower than the 2018-2022 average (Figure 2)

### Season to Date (June 10, 2023)

- 263 emergency department visits for heat-related illness have been identified (Figure 1)

**Figure 1. Emergency Department Visits for Heat-Related Illness and Maximum Heat Index -- North Carolina, May 1 - June 10, 2023**

Source: NC DETECT Data and State Climate Office at NC State University

Max Heat Index is for Raleigh-Durham International Airport (RDU). NC Average Max Heat Index is for emergency department visit location.

<sup>1</sup>The Sandhills sub-region is comprised of the following counties from the Piedmont and Coastal regions: Bladen, Cumberland, Harnett, Hoke, Lee, Montgomery, Moore, Richmond, Robeson, and Scotland.

**Table 1.** Visits by sex and age group - June 4-10, 2023

	N=50*	(%)†
<b>Sex</b>		
Male	36	(72)
Female	14	(28)
<b>Age</b>		
0-14	4	(8)
15-18	0	(0)
19-24	4	(8)
25-44	21	(42)
45-64	9	(18)
65+	12	(24)

\*n may vary from weekly total visits † may not total 100 due to rounding ‡ missing severity data = 25 § definitions of heat related illness categories: <https://www.cdc.gov/niosh/topics/heatstress/heatrelatedillness.html> || other effects include heat fatigue, heat edema, other effects of heat and light, and other effects unspecified

NOTE: Emergency department visit records and maximum heat indices were obtained from NC DETECT and the State Climate Office at NC State University, respectively. Heat-related illness is captured through a near real-time keyword search for 'heat', 'hot', 'hyperthermia', 'heat cramp', 'heat exhaustion', 'heat stroke', and 'sun stroke' in chief complaint or triage notes of emergency department records or a diagnosis code for heat-related illness. These figures present an estimate of the number of emergency department visits for heat-related illness. Please contact [autumn.locklear@dhhs.nc.gov](mailto:autumn.locklear@dhhs.nc.gov) for more information.

**Table 2.** Visits by severity – June 4-10, 2023

	N=25‡	(%)†
<b>Severity§</b>		
Heat Exhaustion	8	(32)
Heat Syncope	7	(28)
Other Effects	10	(40)

**Figure 2. Percent of Total Emergency Department Visits for Heat-Related Illness -- North Carolina, 2023 Compared to Historical Average**

\*Week ending dates may vary by a few days for earlier years. For data week definitions see <https://ndc.services.cdc.gov/wp-content/uploads/MMWR-Week-Log-2022-2023.pdf>. Hospitals transitioned from the ICD-9-CM diagnosis code standard to ICD-10-CM in 2015. This transition may impact the number of emergency department visits with a heat related illness diagnosis.
