

North Carolina Heat Report

August 13–August 19, 2023

This Week

- Daily maximum heat indices ranged from 89°F to 113°F (median = 101°F) at Raleigh-Durham International Airport (RDU)
- 367 emergency department visits for heat-related illness were identified (Figure 1)
 - 69% of visits were among males (Table 1)
 - The highest proportion of visits were among patients aged 25-44 years (35%) (Table 1)
 - The most frequent heat related diagnosis code was Heat Exhaustion (n = 105) (Table 2)
 - The highest proportion of visits occurred in hospitals in the Piedmont (58%) and Coastal (38%) regions
 - 18% of visits occurred in hospitals in the Sandhills sub-region¹
- During August 13–August 19, the proportion of emergency department visits for heat-related illness was 0.38%, higher than the 2018-2022 average of 0.18%. (Figure 2)

Season to Date (August 19, 2023)

- 2,989 emergency department visits for heat-related illness have been identified (Figure 1)

Figure 1. Emergency Department Visits for Heat-Related Illness and Maximum Heat Index -- North Carolina, May 1 - August 19, 2023

Source: NC DETECT Data and State Climate Office at NC State University
Max Heat Index is for Raleigh-Durham International Airport (RDU). NC Average Max Heat Index is for emergency department visit location.

¹The Sandhills sub-region is comprised of the following counties from the Piedmont and Coastal regions: Bladen, Cumberland, Harnett, Hoke, Lee, Montgomery, Moore, Richmond, Robeson, and Scotland.

Table 1. Visits by sex and age group - August 13-August 19, 2023

	N=367	(%)†
Sex		
Male	255	(69)
Female	112	(31)
Age		
0-14	16	(4)
15-18	22	(6)
19-24	35	(10)
25-44	129	(35)
45-64	84	(23)
65+	81	(22)

† may not total 100 due to rounding ‡ missing severity data = 163 § definitions of heat related illness categories:

<https://www.cdc.gov/niosh/topics/heatstress/heatrelatedillness.html> || other effects include heat fatigue, heat edema, other effects of heat and light, and other effects unspecified

NOTE: Emergency department visit records and maximum heat indices were obtained from NC DETECT and the State Climate Office at NC State University, respectively. Heat-related illness is captured through a near real-time keyword search for 'heat', 'hot', 'hyperthermia', 'heat cramp', 'heat exhaustion', 'heat stroke', and 'sun stroke' in chief complaint or triage notes of emergency department records or a diagnosis code for heat-related illness. These figures present an estimate of the number of emergency department visits for heat-related illness. Please contact autumn.locklear@dhhs.nc.gov for more information.

Table 2. Visits by severity – August 13-August 19, 2023

	N=204‡	(%)†
Severity§		
Heat Cramp	7	(3)
Heat Exhaustion	105	(51)
Heat Stroke	2	(1)
Heat Syncope	20	(10)
Other Effects	70	(34)

Figure 2. Percent of Total Emergency Department Visits for Heat-Related Illness – North Carolina, 2023 Compared to Historical Average

*Week ending dates may vary by a few days for earlier years. For data week definitions see <https://ndc.services.cdc.gov/wp-content/uploads/MMWR-Week-Log-2022-2023.pdf>. Hospitals transitioned from the ICD-9-CM diagnosis code standard to ICD-10-CM in 2015. This transition may impact the number of emergency department visits with a heat related illness diagnosis.
